

Belly Button

In this assignment, you will develop an interactive dashboard to explore the Belly Button Biodiversity dataset, which catalogs microbes found in human navels. The dataset shows that a small number of microbial species, or operational taxonomic units (OTUs), are present in over 70% of individuals, while most OTUs are relatively rare. Your dashboard will feature interactive visualizations such as bar charts and bubble charts to display the prevalence and distribution of these OTUs. By building this dashboard, you'll enhance your skills in data visualization, interactive design, and data analysis, while uncovering insights into the diversity of microbial life in human navels
